

JS和 Rust 之间的通信

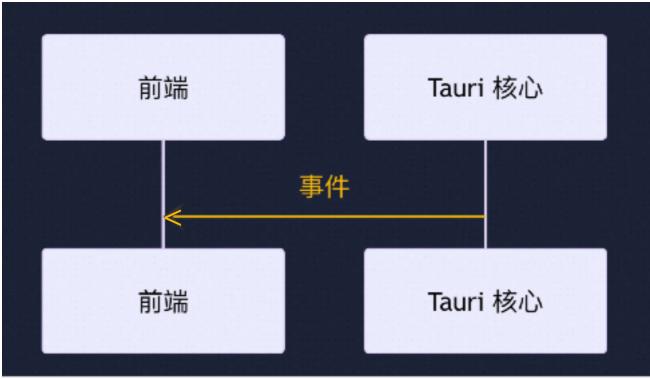

· 超的力力 日占

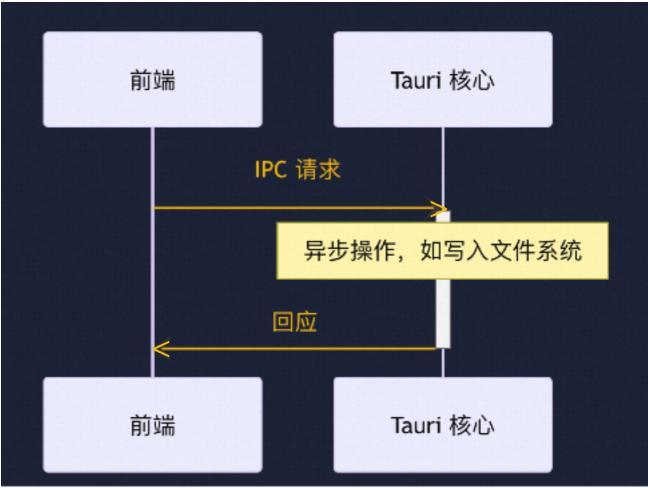

```
#[command]
pub async fn download_file(
   app: AppHandle,
    params: DownloadFileParams
) -> Result<(), String> {
   let window: Window = app.get_window("pake").unwrap();
    let output_path = api::path::download_dir().unwrap().join(params.filename);
   let file_path = check_file_or_append(output_path.to_str().unwrap());
   let download = Download::new(&params.url, Some(&file_path), None);
   match download.download() {
        Ok(_) => {
            show_toast(&window, &get_download_message());
            0k(())
        Err(e) => {
            show_toast(&window, &e.to_string());
            Err(e.to_string())
```

```
pub fn show_toast(window: &Window, message: &str) {
    let script = format!(r#"pakeToast("{}");"#, message);
    window.eval(&script).unwrap();
                                           Toast 功能 [Rust 调 JS]
```

事件通信 [listen]

指令调用 [invoke]

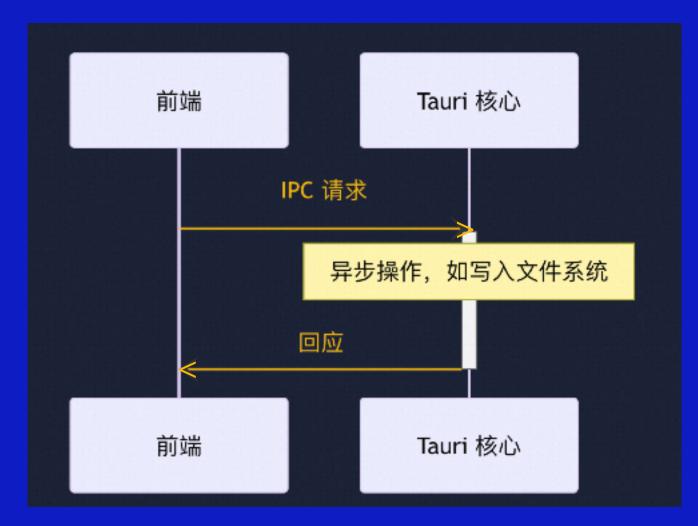

JS和Rust之间的通信

```
下载功能 [JS 调 Rust] invoke('download_file', { params: { url, filename }});
                                                                           Rust
#[command]
pub async fn download_file(
    app: AppHandle,
    params: DownloadFileParams
) -> Result<(), String> {
    let window: Window = app.get_window("pake").unwrap();
    let output_path = api::path::download_dir().unwrap().join(params.filename);
    let file_path = check_file_or_append(output_path.to_str().unwrap());
    let download = Download::new(&params.url, Some(&file_path), None);
    match download.download() {
       0k(_) => {
           show_toast(&window, &get_download_message());
           0k(())
                                                                           Rust
 pub fn show_toast(window: &Window, message: &str) {
       let script = format!(r#"pakeToast("{}");"#, message);
      window.eval(&script).unwrap();
                                                       Toast 功能 [Rust 调 JS]
```

有趣的功能

指令调用 [invoke]

JS

事件通信 [listen]

各类事件能力承接

有趣的功能
